|  | Mounting hole spacing | Approximately 35 mm                         |

### PRODUCT DESCRIPTION

This EFI clutch fan is designed specifically for the Mazda 2000 EFI pickup and is fully compatible with its engine cooling system. It uses a thermostatic mechanism with a bimetallic spring to sense radiator temperature and adjust fan speed accordingly, ensuring optimal cooling, reduced fuel consumption, and quieter operation when the engine is cold. For best performance, always verify rotation direction and type before installation. Authenticity and quality are guaranteed by Autochana.
